

## Multiple Time Frames for Maximum Success

Master Traders use multiple time frame analysis (MTF) as part of their trading strategy.

In this short course, we will describe what multiple time frame analysis is and how to choose the various periods and how to put it all together.

Candlesticks convey different messages of supply and demand.

In Multiple Time Frames (MTF), we look for the best candlesticks price patterns

Trading when MTFs are “in alignment” dramatically increase your odds of success

This session will bring clarity to what confuses the majorities.

### Learn:

The language of candlesticks and how to interpret price action in any time frame based on the messages on other time frames

- What it means to trade when MTF is “in alignment”
- The risks when trading against MTF alignment.
- How to scan for new setups using MTF and discuss what to look for in entering those bullish and bearish patterns using MTF on the time frame you are trading
- How trading using Master Trader Strategies (MTS) – with MTF in alignment – will dramatically increase your odds of success in trading or investing in any Index, ETF, Currency or Commodity in any time frame.
