

Beginners guide to Trading Volatility and Market Internals

Learn how to profit from trading Volatility products after extreme Fear (from market selloffs and great uncertainty) or Greed (complacency after extended rallies).

It can be easy to tell when.

The CBOE Volatility Index (VIX) measures the [implied volatility](#) of S&P 500 options and is known as the "Fear Index."

It rises during times of fear and market uncertainty like with the recent market selloff.

Combining the Master Trader "Three Legged Stool" of Technical Analysis, Inter-Market Analysis and Market Internals Analysis the odds are placed on your side.

Learn:

- You can't trade the VIX; learn to profit from trading Volatility ETFs and Options
- Learn how VIX Futures have "headwinds" the majority of the time, favoring shorting
- Learn how to use Master Trader Strategies on SPY and VXX to time your entries to trading Volatility
- Learn simple market timing using breadth and sentiment gauges
- Watch us scan for new trade setups and discuss what to look for to invest and trade in these volatile markets

Swing Trading Course

Swing Trading Strategies is precisely designed for traders and investors wanting to create wealth and income holding positions a few days to weeks.

The course teaches you a thought process by building technical concepts upon each other to be a profitable swing trader - and without spending a lot of time in front of a trading screen.
