

## Directional Options Strategies – Swing and Day Trading

Directional trading is widely associated with options trading since a number of strategies can be used to capitalize on a move higher or lower in the broad market or a particular stock.

Directional trades, like long calls or long puts, offer you the chance to profit if you're right about the direction of the underlying stock.

But, having profits that aren't capped can come at a price—not only does the stock need to move in the right direction, it has to move *enough* to overcome the premium paid for the option

Buying and selling options using Master Trader Technical Strategies (MTS) provides excellent opportunities to generate regular weekly income.

And, Buying call and put options have limited risk and can provide huge returns when used properly with the charts.

In this course, we are going to teach you how to swing and day trade options as directional trades using Master Trader compelling trade setups.

Learn our approach on how to intelligently trade stocks and options on the best setups.
