March 2009 Interim Update

Hello All,

As you are aware from the **Main March Newsletter** we are in a special area of **TIME** for the **S&P** and major Index's. Friday was the **13th** being the **5th day** of the week and **13th day** of the Month and the **3rd Month** of the year so a few **Fibonacci** links in date. This is a possible high ready for another drop down to new lows. The more important date is the **21st** that is the **Spring Equinox** as explained below. The reason that is more important is because it links in with the date of the **MC1-5** low and the **MC2-9** as well as being a **2.618** of time of the bigger **Wave B** from the main highs as shown in the Main Newsletter.

We have already hit the first **2.618** of price at **686.79** of the main **Wave A** down as shown on the **S&P** in the Main Newsletter and went through it, so the next level being the **2.618** of price at **639.03** of the **Wave B** becomes the next target if the market does drop for another low. This would also be in the area of Time of the **Equinox** and that Time is also a **2.618** of Time of **Wave B** so making a very possible **2.618 square of price and time** if a new low is made. The alternate is if the low is already in then we are in yet again a bigger **ABC** wave formation being **Wave A** up from **21st November 2008** to the High on **6th January 2009** followed by a **Wave B** down to the recent lows **6th March** and now up for the **Wave C**. All is possible at the moment so great care is needed trading here especially if this is a **Wave C** up because that would then mean yet another big drop would happen and quite soon.

Other than that there is not a lot to say in this update so look at the charts as they are pretty much self explanatory.

The Next Main Newsletter will be out on **Sunday 5th April**.

Steve.

SP500 Index (spx)

Friday was the **13th** with **5 traded days** up from the **MC1-3** low and **13 traded days** from **MC1-(1)** inversion point and **8 calendar days** from **MC1-3** and **21 calendar days** from **MC1-(1)**. Although there are nice links, yet again they are not symmetrical but most likely will be the **MC1-4** high. Obviously with non symmetrical links the **MC1-4** could make it into Monday to finalise. **MC2-9** low is due and if the bigger **ABC** explained above is happening then most likely the **MC2-9** low came with the **MC1-3** but can only be proven only when the market goes above the **MC1-2** **Matrix** point. If the overall down picture is still intact then **MC2-9** would occur as a new low with **MC1-5**.

FTSE 100 Index (ukx)

The **FTSE** has now also broken the lows in **October 2008** but has yet to break the **2003 lows** so this could be soon. Like the **S&P MC1-3** low is now and could also be an early **MC2-9** if a bigger **ABC** is forming otherwise another drop to **MC1-5** with **MC2-9** would be expected. Friday was **34 traded days** from the **MC1-1** high so this is most likely **MC1-4** like the **S&P**.

Dax 30 Index

Again a similar situation to the **FTSE** and **S&P** regarding the **MC1-3** low being in now and possibly an early **MC2-9** **MC1-4** due soon considering **Monday 16th** is **34 calendar days** from the **MC1-1** high.

Spot Gold

As explained in the Main Newsletter "Gold" got very near to the record high in 2008 but backed off bang between the **0.886** and **0.941** retracement level at **\$1006.20**. We are now in the average area of the **MC4-3** so the choice is either **MC3-12** arrives now with the **MC4-3** and this up move was just a retracement ready for another drop or we are just part of the way through an up move and the **MC3-12** will arrive with the **MC2-12** or if the **MC2-12** inverts it could arrive as late as **MC2-1**". We are waiting for proof of the **MC2-11** being in with either the late **MC1-7** as it should be in a bigger down **Matrix Cycle** or if it will be even later with the **MC1-9**. At the moment the **MC2-10** is the second **MC2** high in a row since the last **MC3-11** low and we are fast approaching the **MC2** inversion area so big moves could happen shortly.

Sterling Dollar

Like the Main Index's we are now out of the **MC1** inversion area and it looks like **MC1-1** did invert making the **MC1-2** a high on time with the recent low the **MC1-3**. We are due for the **MC2-10** low and this could be in now with the **MC1-3**. If the **MC2-10** is in now then **MC3-14** low would be in an this market should then move up above the **MC2-9** high. The alternate is if the **MC2-10** arrives late with the **MC1-5** confirming the **MC3-14** low.
