

TDT Bootcamp - Notes Of First Week

- Understanding the financial markets has direct correlation to the universe and vibration.

- Time isn't linear and it's applied to financial markets too.

1-3-7-13-21

1-5-9-17-25

- There's a cycle called Chaos to Harmony... Harmony to Chaos... Chaos to Harmony... and so on.

- Classic 1,3,7,13,21... sequence works great, as "Time" expands.
- Understanding the "Nature" and being able to see the repeated patterns in the nature are great starting points on the way to understand the universe and vibration.
- Markets are like never ending music : Consolidations, Expansions, Reversals and Retracements.

TDT Bootcamp - Notes Of First Week

- Bearish closed candles are ignored in Bullish Countings.
- Bullish closed candles are ignored in Bearish Countings.

Consolidations

We generally observe 10-Candle Long or 20-Candle Long Consolidations, 7-long and 13-long consolidations are uncommon and if they are occurred, this means that market changes the gears

Expansions & Reversals

We generally observe 4-Candle Long and 7-Candle Long Expansions. 13-Candle Long and 21-Candle Long expansions are uncommon, yet 13-candle long and 21-candle long reversals are quite common in the markets. 7-Candle Long reversals are also common

Retracements

We generally observe 3-Candle Long and 4-Candle Long retracements in the markets.

Counting The Expansions/Reversals, Where There's No Exact Highs/Lows

We start counting by using the candle, that left us from the consolidation. Any candle inside the consolidation should NOT be counted, regardless of it's the candle, that creates the lowest low or highest high. Our focus should be at the candle leaving us from the consolidation.

Multi-Timeframe Counting

Multi-Timeframe counting is the key to Time Dilation Theory, since the universe and the financial markets have been fractal in their nature. This is everywhere in our lives. Counting only one timeframe can work for you for a short time, however you won't be profitable in longevity.

Just as, you can take scalp entry inside of a HTF retracement (7th to 9th HTF candle for instance), you can also take continuation (expansion) entry, as daytrade, after 13th HTF candle confirms your reversals. vice versa.... This part is also up to the trader and his/her style and character.

H4 Countings ⇒ 15m & 5m Countings (Daytrades)

H1 Countings ⇒ 5m & 1m Countings (Scalps)

D1 Countings ⇒ H1 & 15m Countings (Short Term Trades)

W1 Countings ⇒ D1 & H4 Countings (Swing Trades)

M1 Countings ⇒ W1 & D1 Countings (Position Trades)
